Introduction

61 Particle physics is a remarkably successful field of scientific inquiry. The ability to
62 precisely predict the properties of a exceedingly wide range of physical phenomena,
63 such as the description of the cosmic microwave background (cite planck) anomalous
64 magnetic moment of the muon (cite paper on this), and the measurement of the
65 number of weakly-interacting neutrino flavors is truly amazing.

66 The theory that has allowed this range of predictions is the Standard Model of
67 particle physics (SM) as developed by Gell-Mann, This quantum field theory (QFT)
68 contains a tiny number of particles, whose interactions describe phenomena up to at
69 least the TeV scale. These particles are manifestations of the fields of the Standard
70 Model, after application of the Higgs Mechanism. The particle content of the SM
71 consists only of the six quarks, six leptons, the four gauge bosons, and the scalar
72 Higgs boson.

73 Despite its impressive range of described phenomena, the Standard Model has
74 some theoretical and experimental deficiencies. The SM contains 26 free parameters
75 ¹. If the number of free parameters could be understood in terms of a more fun-
76 damental theory, this would be more theoretically pleasing. The major theoretical
77 concern of the Standard Model, as it pertains to this thesis, is the “hierachy problem”.
78 The light mass of the Higgs boson (125 GeV) should be quadratically dependent on
79 the scale of UV physics, due to the quantum corrections from high-energy physics
80 processes. The most perplexing experimental issue is the existence of “dark mat-
81 ter”.From cosmological data, it has been shown that there exists additional matter

stuff here?

82 which has not yet been seen interacting with the particles of the Standard Model.
83 There is no particle in the SM which can act as a candidate for dark matter.

84 Both of these major issues, as well as numerous others, can be solved by the
85 introduction of “supersymmetry”. In supersymmetric theories, all particles have a
86 so-called “superpartners”, or sparticles, differing from the particle by 1/2 in spin.
87 These theories solve the hierarchy problem, since the corrections induced from the
88 superpartners exactly cancel those induced by the SM particles. In addition, these
89 theories are usually constructed assuming R -parity, which can be thought of as the
90 “charge” of supersymmetry, with SM particles having $R = 1$ and sparticles having
91 $R = -1$. In collider experiments, since the incoming SM particles have total $R = 1$,
92 the resulting sparticles are produced in pairs. This produces a rich phenomenology,
93 which is often characterized by large missing transverse energy (E_T^{miss}), which provides
94 significant discrimination against SM backgrounds.

95 Despite the power of searches for supersymmetry where E_T^{miss} is a primary dis-
96 criminating variable, there has been significant interest in the use of other variables
97 to discriminate against SM backgrounds. These include searches employing variables
98 such as $\alpha_{\text{something}}$, $M_{T,2}$, and the razor variables (M_R, R^2). In this thesis, we will
99 present the first search for supersymmetry using the novel Recursive Jigsaw Recon-
100 struction (RJR) technique. RJR can be considered the conceptual successor of the
101 razor variables. We impose a particular final state “decay tree” on an event, which
102 roughly corresponds to a simplified Feynmann diagram. This allows an understand-
103 ing of internal decay structure of an event, as well as additional rejection of SM
104 backgrounds.

105 This thesis details a search for the superpartners of the gluons and quarks, the

¹This is the Standard Model corrected to include neutrino masses. These parameters are the fermion masses (6 leptons, 6 quarks), CKM and PMNS mixing angles (8 angles, 2 CP-violating phases), W/Z/Higgs masses (3), the Higgs field expectation value, and the couplings of the strong, weak, and electromagnetic forces (3 α_{force}).

106 gluinos and squarks, in final states with zero leptons, with of data using the AT-
107 LAS detector. This thesis is organized as follows. The theoretical motivation of the
108 Standard Model and supersymmetry are described in Chapters 2 and 3. The Large
109 Hadron Collider and the ATLAS detector are presented in Chapters 4 and 5. Chap-
110 ter 5 provides a detailed description of Recursive Jigsaw Reconstruction, as well as
111 a description of the variables used for the particular search presented in this thesis.
112 Chapter 6 presents the details of the analysis, including the dataset, object recon-
113 struction, and selections used by the analysis. In Chapter 7, the final results are
114 presented; since there is no evidence of a supersymmetric signal in the analysis, we
115 present the final exclusion curves in simplified supersymmetric models.

116

Chapter 2

117

The Standard Model

118 Here you can write some introductory remarks about your chapter. I like to give each
119 sentence its own line.

120 When you need a new paragraph, just skip an extra line.

121 **2.1 Quantum Field Theory**

122 **2.2 Symmetries**

123 **2.3 The Standard Model**

124 **Overview**

125 By using the asterisk to start a new section, I keep the section from appearing in the
126 table of contents. If you want your sections to be numbered and to appear in the
127 table of contents, remove the asterisk.

128 **Fermions**

129 By using the asterisk to start a new section, I keep the section from appearing in the
130 table of contents. If you want your sections to be numbered and to appear in the
131 table of contents, remove the asterisk.

132 **Bosons**

133 By using the asterisk to start a new section, I keep the section from appearing in the
134 table of contents. If you want your sections to be numbered and to appear in the
135 table of contents, remove the asterisk.

136 **2.4 Electroweak Symmetry breaking**

137 By using the asterisk to start a new section, I keep the section from appearing in the
138 table of contents. If you want your sections to be numbered and to appear in the
139 table of contents, remove the asterisk.

140 **2.5 Deficiencies of the Standard Model**

141 By using the asterisk to start a new section, I keep the section from appearing in the
142 table of contents. If you want your sections to be numbered and to appear in the
143 table of contents, remove the asterisk.

144

Chapter 3

145

Supersymmetry

146 Here you can write some introductory remarks about your chapter. I like to give each
147 sentence its own line.

148 When you need a new paragraph, just skip an extra line.

149 **3.1 Motivation**

150 **Only Additional allowed Lorentz invariant symmetry**

151 **Dark Matter**

152 **Cancellation of quadratic divergences in corrections to the**

153 **Higgs Mass**

154 **3.2 Supersymmetry**

155 **3.3 Additional particle content**

156 **3.4 Phenomenology**

157 **R parity Consequences for sq/gl decays**

The Large Hadron Collider

160 Here you can write some introductory remarks about your chapter. I like to give each
161 sentence its own line.

162 When you need a new paragraph, just skip an extra line.

163 **4.1 Magnets**

164 By using the asterisk to start a new section, I keep the section from appearing in the
165 table of contents. If you want your sections to be numbered and to appear in the
166 table of contents, remove the asterisk.

167

Chapter 5

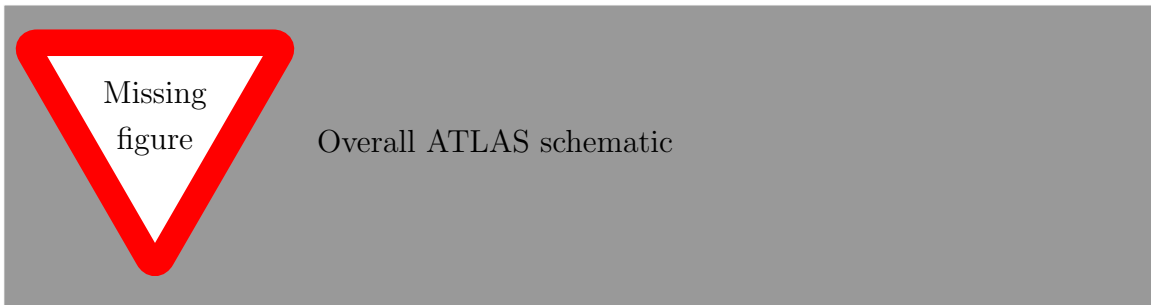

168

The ATLAS detector

169 Here you can write some introductory remarks about your chapter. I like to give each
170 sentence its own line.

171 When you need a new paragraph, just skip an extra line.

172

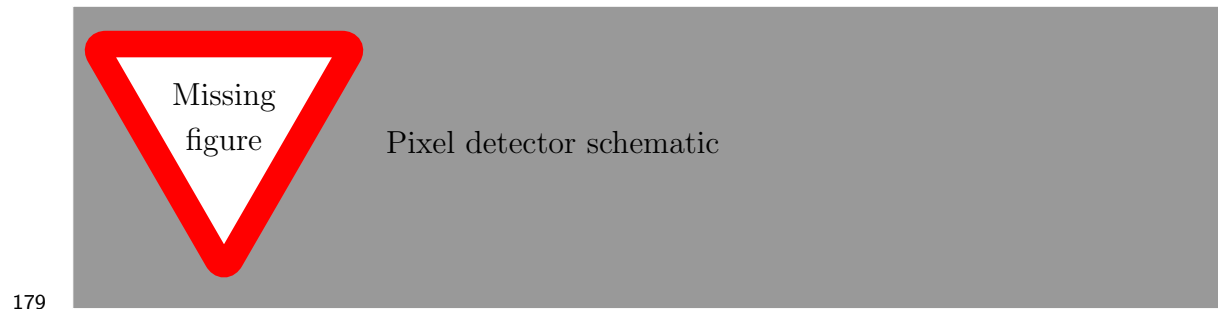

173

174 **5.1 Inner Detector**

175 By using the asterisk to start a new section, I keep the section from appearing in the
176 table of contents. If you want your sections to be numbered and to appear in the
177 table of contents, remove the asterisk.

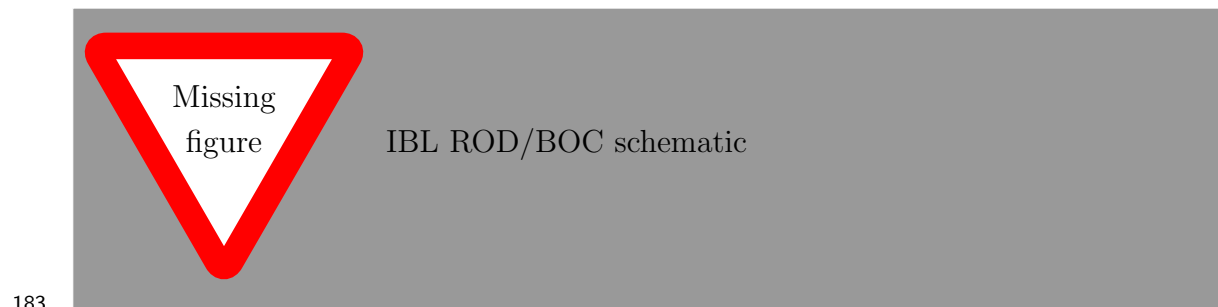

178 **Pixel Detector**

180

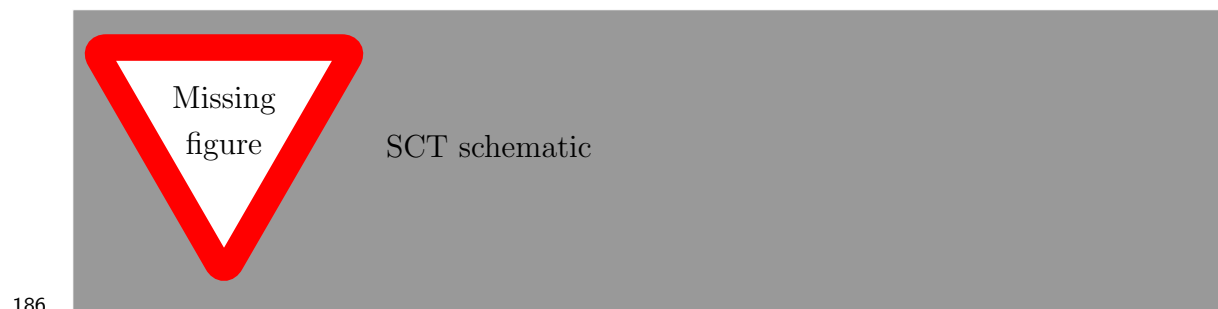

181 **Insertable B-Layer**

182 Qualification task, so add a bit more.

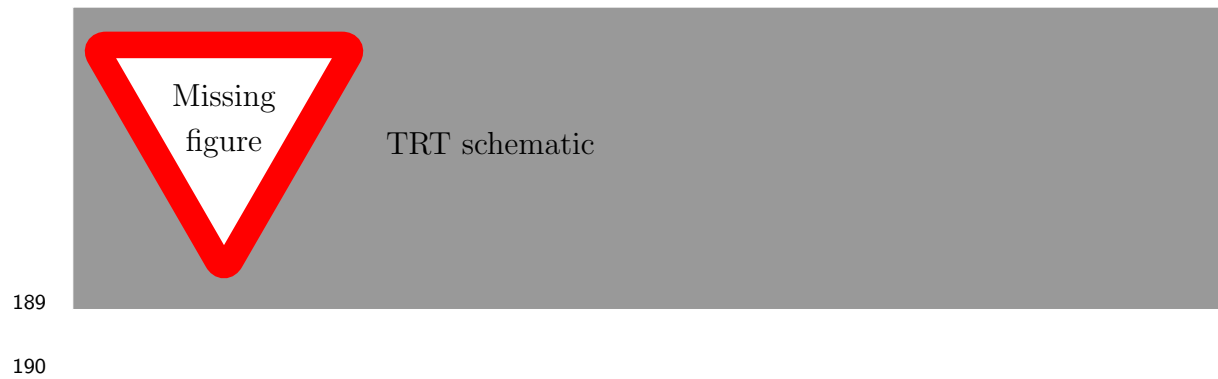

184

185 **Semiconductor Tracker**

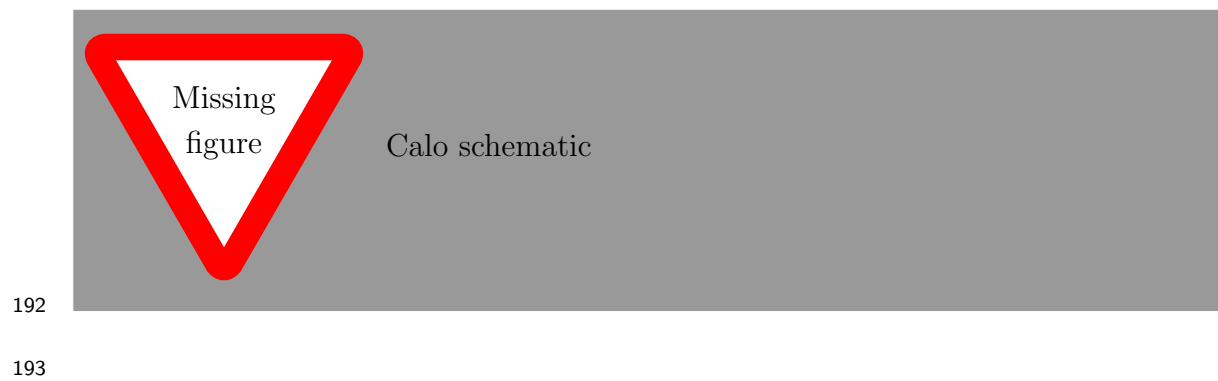

187

188 **Transition Radiation Tracker**

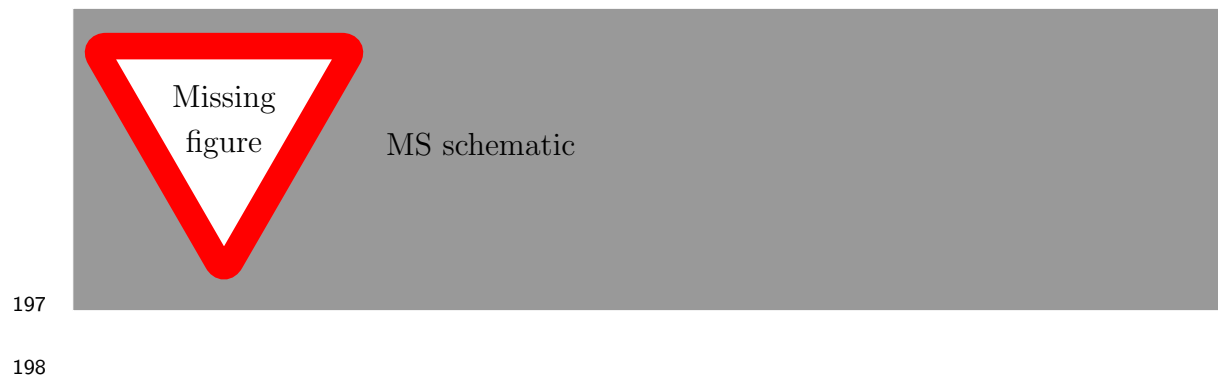

191 **5.2 Calorimeter**

194 **Electromagnetic Calorimeter**

195 **Hadronic Calorimeter**

196 **5.3 Muon Spectrometer**

The Recursive Jigsaw Technique

201 Here you can write some introductory remarks about your chapter. I like to give each
202 sentence its own line.

203 When you need a new paragraph, just skip an extra line.

204 **6.1 Razor variables**

205 By using the asterisk to start a new section, I keep the section from appearing in the
206 table of contents. If you want your sections to be numbered and to appear in the
207 table of contents, remove the asterisk.

208 **6.2 SuperRazor variables**

209 **6.3 The Recursive Jigsaw Technique**

210 **6.4 Variables used in the search for zero lepton**

211 **SUSY**

Title of Chapter 1

214

Chapter 8

215

Title of Chapter 1

216 Here you can write some introductory remarks about your chapter. I like to give each
217 sentence its own line.

218 When you need a new paragraph, just skip an extra line.

219 **8.1 Object reconstruction**

220 **Photons, Muons, and Electrons**

221 **Jets**

222 **Missing transverse momentum**

223 Probably longer, show some plots from the PUB note that we worked on

224 **8.2 Signal regions**

225 **Gluino signal regions**

226 **Squark signal regions**

227 **Compressed signal regions**

228 **8.3 Background estimation**

229 **Z $\nu\nu$**

230 **W $e\nu$**

231 **$t\bar{t}$ bar**

232

Chapter 9

233

Title of Chapter 1

234 Here you can write some introductory remarks about your chapter. I like to give each
235 sentence its own line.

236 When you need a new paragraph, just skip an extra line.

237 **9.1 Statistical Analysis**

238 maybe to be moved to an appendix

239 **9.2 Signal Region distributions**

240 **9.3 Pull Plots**

241 **9.4 Systematic Uncertainties**

242 **9.5 Exclusion plots**

243

Conclusion

244 Here you can write some introductory remarks about your chapter. I like to give each
245 sentence its own line.

246 When you need a new paragraph, just skip an extra line.

247 **9.6 New Section**

248 By using the asterisk to start a new section, I keep the section from appearing in the
249 table of contents. If you want your sections to be numbered and to appear in the
250 table of contents, remove the asterisk.
